

Year 6

<i>Addition</i>	<i>Subtraction</i>	<i>Multiplication</i>	<i>Division</i>
<p><u>Mental Strategies</u> Consolidate previous years.</p> <p>Children should experiment with order of operations, investigating the effect of positioning the brackets in different places, e.g. $20 - 5 \times 3 = 5$; $(20 - 5) \times 3 = 45$</p> <p><u>Vocabulary</u> See previous years</p> <p><u>Generalisations</u> Order of operations: brackets first, then multiplication and division (left to right) before addition and subtraction (left to right). Children could learn an acrostic such as PEMDAS, or could be encouraged to design their own ways of remembering. Sometimes, always or never true? Subtracting numbers makes them smaller.</p> <p><u>Some Key Questions</u> What do you notice? What's the same? What's different? Can you convince me? How do you know?</p>	<p><u>Mental Strategies</u> Consolidate previous years.</p> <p>Children should experiment with order of operations, investigating the effect of positioning the brackets in different places, e.g. $20 - 5 \times 3 = 5$; $(20 - 5) \times 3 = 45$</p> <p><u>Vocabulary</u> See previous years</p> <p><u>Generalisations</u> Order of operations: brackets first, then multiplication and division (left to right) before addition and subtraction (left to right). Can they use this to recite other times tables (e.g. the 13 times tables or the 24 times table)</p> <p><u>Vocabulary</u> See previous years common factor</p> <p><u>Generalisations</u> Order of operations: brackets first, then multiplication and division (left to right) before addition and subtraction (left to right). Children could learn an acrostic such as PEMDAS, or could be encouraged to design their own ways of remembering. Understanding the use of multiplication to support conversions between units of measurement.</p>	<p><u>Mental Strategies</u> Children should count regularly, building on previous work in previous years. Children should practice and apply the multiplication facts to 12 x 12.</p> <p><u>Vocabulary</u> see years 4 and 5</p> <p><u>Generalisations</u> Order of operations: brackets first, then multiplication and division (left to right) before addition and subtraction (left to right). Children could learn an acrostic such as PEMDAS, or could be encouraged to design their own ways of remembering.</p> <p>Sometimes, always, never true questions about multiples and divisibility. E.g.: If a number is divisible by 3 and 4, it will also be divisible by 12. (also see year 4 and 5, and the hyperlink from the Y5 column)</p> <p>Using what you know about rules of divisibility, do you think 7919 is a prime number? Explain your answer.</p>

		<p><u>Some Key Questions</u> What do you notice? What's the same? What's different? Can you convince me? How do you know?</p>	<p><u>Some Key Questions for Year 4 to 6</u></p> <p>What do you notice?</p> <p>What's the same? What's different?</p> <p>Can you convince me?</p> <p>How do you know?</p>
